## Real Time Video - Anytime - Anywhere

**SurvayaCam** provides real-time, mobile surveillance that uses multiple connection types such as **3G, GPRS, HSDPA and WLAN**. SurvayaCam makes use of existing technologies in a way that provides a fully scalable and reliable mobile surveillance system.

### System Components

The **SurvayaCam** system comprises of three parts; The Transmitter, the Viewer and the Relay. These three parts are used to send, manage and view the video streams.

**The Transmitter** is covert and compact so that it can be concealed about the body or in situ. It is responsible for capturing a live feed from either a webcam or digital camera that is connected to the unit. The Transmitters are easy-to-use with a touch screen interface allowing the user to make modifications to the setup quickly and efficiently.

**The Viewer** is used in the control room or location based sites to view the incoming streams from the Transmitters. The Viewer also allows the user the option to view saved archived files stored on the Relay.

**The Relay** is responsible for all video stream management, relaying and archiving, as well as handling all authorisation requests on the system. The Relay comes complete with user licences and support.
